What is ISO 5001:2018?

- ISO 50001:2018 specifies requirements for establishing, implementing, maintaining and improving an energy management system, whose purpose is to enable an organization to follow a systematic approach in achieving continual improvement of energy performance, including energy efficiency, energy use and consumption.

- This framework created a way in which ADM could create a management system that would advance it's business sustainably.

- By tracking greenhouse gas emissions and energy intensity while creating a culture of energy saving, we can see how far we have progressed.
